

## Seaside Recreation Area, Convergence of Culture and Leisure for the East Coast

Port of Hualien is implementing the "Inner Harbor Passenger and Outer Harbor Cargo Transport" zoning plan, which combines green and eco-friendly leisure activities with cruise service area to attract international tourists. Hualien port aims to be a metropolitan harbor and looks to integrate surrounding lands with tourist resources such as the development of whale watching programs, hotel and restaurants. Plans are already underway to combine adjacent urban warehouses with the surrounding waterfront facilities which can be turned into marine education centers and used for cultural innovation, tourism, leisure, recreation, and as other multi-functional art spaces.

## East Coast Maritime Shipping Hub

Port of Hualien faces the Pacific Ocean to the east and the central mountains to the west. It is an artificial port formed by the combination of east and west seawalls. It is the only international commercial port in Eastern Taiwan, and is only 2 hours from the Main Pacific Channel.

Port of Hualien cargo transport is linked to the Beibin outer ring road, and an automatic gate outpost is constructed at the entry to the port. The port area has automated facilities that provide rapid cargo clearance services, and its piers have automated closed conveyor equipment aimed at improving stevedoring efficiency. The cargo of this port is primarily cement, gravel, wood panels, ore, and coal-based product. The marine Blue Highway can be used to reach Port of Suao, which has become a new route of choice for cargo transport between the East Coast of Taiwan and the Lanyang Plains.

Port of Hualien received European EcoPort certification in 2016 from the promotion of various green port and environmental protection measures. The best practical examples include the Hualien Port Water Resources Bank, construction of the Beiping culvert outer ring road, and the combined railway and maritime transport.

▲ Passenger Clearance Service Station

- Ferry/Cruise Terminal Area
- Port Administration Building
- Logistic & Warehousing Area
